

Cover Letter

I started programming in my second year in college, my love for building applications especially web applications drove me to taking a 3 year course master (Master Computer Applications) in Jamia Hamdard, New-Delhi, India.

I started programming by learning PHP because it has an easy learning curve and majority of web applications are built using PHP, after a couple of years of writing procedural PHP and building applications from scratch, i went into learning Object Oriented Programming using PHP and taking Laravel as my preferred framework.

My love for machine learning and data mining also drove me into learning python, as it is one of the two major languages used in this field. Am a proficient user of python. The rise and need for real-time web applications lead me into learning javascript and NodeJS(expressJS as my framework) using MongoDB for the database.

I love taking on challenging tasks, solving problems and also translating business and user needs into high-quality, cost-effective designed solutions.

I love learning new things and keeping up to date with changes in my field.

I would love and would greatly appreciate it, if am allowed to work among the great minds in your firm, as this would move me closer to my goal; developing applications that are been used by users in different areas of the world as well as growing to be an expert in the craft of Software Engineering.

Sincerely,
Olakunle M. ODEGBARO
